

PaletteArena

Covering the entire purchase-to-pay process

Automate and match all your company's business flows, invoices, contracts, purchase orders and employee expenses with our solution installed on premise.

PaletteArena is our software suite for automation of the purchase-to-pay process, installed on premise. You choose the products that suit your company based on the needs today and expand the system at your own pace. PaletteArena is designed to integrate to all ERP systems and has off-the-shelf integration solutions for about 50 different ERP systems.

PaletteArena – our P2P product suite for on-premises

PaletteArena is our complete product suite for the automation of the purchase to payment process. With our solution you gain full control over accounting processes and achieve substantial savings in both time and money. Give your employees the opportunity to manage invoices wherever they are – on the web, in a mobile phone or via e-mail. Receive and send invoices in electronic form. It's quicker, cheaper and more environmentally-friendly. Pre-defined flow and accounting posting proposals determine how an invoice progresses through the system and is posted to accounts before being processed in full.

Take control of the purchasing process

Invoices can be matched to purchase orders at the line or total level, or to contracts. Palette offers a simplified ordering process that steers users to purchase the right goods, from the right supplier, at the right price. With all purchasing statistics available, you'll have a solid basis for negotiating prices and terms. For investment projects, purchases can be governed by the set budget. You gain full control over the project's costs and get early warnings when the budget is in danger of being exceeded.

Easy management of expenses

Is the process of managing employee expenses complex and time consuming in your organisation? Then why not let employees process their expenses directly when they arise? Take a picture of the receipt with a smartphone and e-mail the picture to Palette. The expense information will then be entered into the system and possible credit card transactions can also be linked to the expense report. Along with the receipt, the expense report goes out in a flow for signing and payment.

Powerful reporting tools

With Palette, you gain access to a range of key performance indicators: payments statistics, average processing time, amounts falling due during the month, etc. PaletteArena contains a very powerful reporting tool with a large selection of filters for generating reports. At the click of a button, reports can be exported to Excel for further processing.

Readily accessible and searchable contracts

Do you need to gain control over your agreements and contracts? Would you like to be able to quickly and easily access data for renegotiating a contract? Have periodic invoices matched and gone directly to payment? This is all provided and handled by our electronic contract database.

Palette integrates with your ERP system

A connection from PaletteArena to your ERP system is required. At Palette we offer a range of ready-to-use connections to the most common ERP systems on the market. This way you get a proven integration which enables a standard configuration and seamless data flow between Palette and your ERP system. Palette's experienced consultants use current industry best

practice to implement the integration to your ERP system.

P2P or AP-solution installed on-premises

With a local installation you take advantage of your existing hardware investment and you get full access to data and documents and you can feed i.e. different BI solutions. It is possible to customise your solution beyond what is possible with standard configuration functionality in the product.

Upgrades and new functionality can only be added through upgrade projects, but you have the flexibility to choose when you want to schedule your service windows.

If your company policy does not allow your internal data to be stored outside your premises or outside your country, an on premise solution would be the option to suit you.

At Palette, we give our customers the option to automate their purchase-to-pay and accounts payable process in the cloud or as an on premise solution. Read more about our cloud solution PaletteOnline.
